Printed in Great Britain

Contents of Volume 65

Number 1, 7 March 1977

ISHIDA, K., Non-equilibrium Thermodynamics of Temporally Oscillating Chemical Reactions: The Case of Limit Cycle . . 1

HIDESHIMA, T., KIMIZUKA, H., ABOOD, L. G. and TANAKA, R., ATP and Other Nucleotide Interaction with Model Compounds of Amino Acids 15

ADLER, I., The Consequences of Contact Pressure in Phyllotaxis. . 29

GREENSPAN, H. P., On the Dynamics of Cell Cleavage . . . 79

LIN, J. and KAHN, P. B., Qualitative Behaviour of Predator–prey Communities 101

JORNÉ, J., The Diffusive Lotka–Volterra Oscillating System . . 133

TREHUB, A., Neuronal Models for Cognitive Processes: Networks for Learning, Perception and Imagination 141

GIESSNER-PRETTRE, C. and PULLMAN, B., On the Conformational Dependence of the Proton Chemical Shifts in Nucleosides and Nucleotides. I. Proton Shifts in the Ribose Ring of Pyrimidine Nucleosides as a Function of the Torsion Angle about the Glycosyl Bond 171

GIESSNER-PRETTRE, C. and PULLMAN, B., On the Conformational Dependence of the Proton Chemical Shifts in Nucleosides and Nucleotides. II. Proton Shifts in the Ribose Ring of Purine Nucleosides as a Function of the Torsion Angle about the Glycosyl Bond 189

LETTERS TO THE EDITOR

KENNEDY, C. M. and SMITH, E. R., Effects of Charge Structure on Long-range Interactions Between Cylindrical Polyelectrolyte Molecules 203

DRAGOMIR, C. T. and CANANAU, S. A., Distribution of Subcellular Components under Gravity Changes. The Special Condition of the Dystrophic Cell 209

Number 2, 21 March 1977

SCHULTZ, S. G., FRIZZELL, R. A. and NELLANS, H. N., An Equivalent Electrical Circuit Model for "Sodium-transporting" Epithelia in the Steady-state 215

WUILMART, C. and WYNS, L., An Evolutionary Scheme for the Histones as Derived from a Study of Internal Repetitions and Homologies Among the Different Classes 231

BERGER, J., A comment on information theory and central dogma of molecular biology (Letter), 393
Biological similarity and group theory, 369
Birds, migrating, why do they fly along coastlines?, 699
Birfurcation theory applied to a simple model of a biochemical oscillator, 727
BOGUSLAVSKY, L. I. (see KHARKATS, Y. I.), 379
BOHREN, C. F., Circular dichroism and optical rotary dispersion spectra of arbitrarily shaped optically active particles, 755
BUTZ, E. (see WALTMAN, P.), 499

CALOW, P. and JENNINGS, J. B., Optimal strategies for the metabolism of reserve materials in microbes and metazoa (Letter), 601
CANANAU, S. A. (see DRAGOMIR, C. T.) (Letter), 209
Cancer and kin selection, 605
CAVENDER, J. A., Kauffman's square-root law: possible correlatives (Letter), 791
Cell adhesion and actin cables, hypotheses on, 397
Cell cleavage, on the dynamics of, 79
Cell populations, heterogeneous mammalian, a cytokinetic model for. III. Tritiated thymidine studies: correlations among multiple kinetic parameters in human tumors, 421
Charge structure, effects of, on long-range interactions between cylindrical polyelectrolyte molecules, 203

CHEN, Y.-D., Fluctuations and noise in non-linear kinetic systems, 357
CHOU, T.-C., On the determination of availability of ligand binding sites in steady-state systems, 345
Ciliary movements, the control of: an application of the cusp catastrophe, 531
Circular dichroism and optical rotary dispersion spectra of arbitrarily shaped optically active particles, 755
Cognitive processes, neuronal models for: networks for learning, perception and imagination, 141
COMINS, H. N., The management of pesticide resistance, 399
Comment on information theory and central dogma of molecular biology, 393
Computer modelling. Application to studies on the initial rate of Na^+ uptake by frog skin epidermis, 653
Conformational dependence of the proton chemical shifts in nucleosides and nucleotides. I. Proton shifts in the ribose ring of pyrimidine nucleosides as a function of the torsion angle about the glycosyl bond, 171
Conformational dependence of the proton chemical shifts in nucleosides and nucleotides. II. Proton shifts in the ribose ring of purine nucleosides as a function of the torsion angle about the glycosyl bond, 189
Consequences of contact pressure in phyllotaxis, 29
Control of ciliary movements: an application of the cusp catastrophe, 531
CORNISH-BOWDEN, A., Assessment of protein sequence identity from amino acid composition data, 735
Cusp catastrophe, an application of: the control of ciliary movements, 531
Cytokinetic model for heterogeneous mammalian cell populations. III. Tritiated thymidine studies: correlations among multiple kinetic parameters in human tumors, 421
Cytomembrane streaming, rotation of bacterial flagella as driven by, 713

DARVEY, I. G., Transient phase kinetics of enzyme reactions where more than one species of enzyme is present at the start of the reaction, 465
DEROME, J.-R., Biological similarity and group theory, 369
Determination of availability of ligand binding sites in steady-state systems, 345
DIBROV, B. F., LIVSHITS, M. A. and VOLKENSTEIN, M. V., Mathematical model of immune processes, 609
Diffusive Lotka–Volterra oscillating system, 133
Distribution of subcellular components under gravity changes. The special condition of the dystrophic cell, 209
DRAGOMIR, C. T. and CANANAU, S. A., Distribution of subcellular components under gravity changes. The special condition of the dystrophic cell (Letter), 209
Dynamics of cell cleavage, 79
DYSON, P. (see WRIGHT, N. A.), 769
Dystrophic cell, the special condition of. Distribution of subcellular components under gravity changes, 209

Ecological systems, on the persistence of, 795
Ecosystems, the niche structure of, 317
Effects of charge structure on long-range interactions between cylindrical polyelectrolyte molecules, 203
Electrostatic interaction of cells, a model for, 523

Enzyme kinetics, the 3 : 3 function in. Possible shapes of v/S and $(1/v)(1/S)$ plots for third degree steady-state rate equations, 281
Enzyme membrane systems, functioning, transfer of ions and electrons across the interface between two immiscible liquids in, 379
Enzyme reactions, transient phase kinetics of, where more than one species of enzyme is present at the start of the reaction, 465
Equivalent electrical circuit model for "sodium-transporting" epithelia in the steady-state, 215
Evolutionary scheme for the histones as derived from a study of internal repetitions and homologies among the different classes, 231

Flagella, rotation of bacterial, as driven by cytomembrane streaming, 713
Fluctuations and noise in non-linear kinetic systems, 357
FOLKMAN, J. (see GREENSPAN, H. P.) (letter), 397
FRIZZELL, R. A. (see SCHULTZ, S. G.), 215
Function, 3 : 3 in enzyme kinetics. Possible shapes of v/S and $(1/v)(1/S)$ plots for third degree steady-state rate equations, 281

Genetic specificity, aminoacyl thiol esters and the origins of, 555
GIESSNER-PRETTRE, C. and PULLMAN, B., On the conformational dependence of the proton chemical shifts in nucleosides and nucleotides. I. Proton shifts in the ribose ring of pyrimidine nucleosides as a function of the torsion angle about the glycosyl bond, 171
GIESSNER-PRETTRE, C. and PULLMAN, B., On the conformational dependence of the proton chemical shifts in nucleosides and nucleotides. II. Proton shifts in the ribose ring of purine nucleosides as a function of the torsion angle about the glycosyl bond, 189
Gompertz curve in an analysis of the dynamics of lizard tail regeneration, use of, 267
GRADMANN, D., Potassium and turgor pressure in plants (letter), 597
GREENSPAN, H. P. and FOLKMAN, J., Hypotheses on cell adhesion and actin cables, 397
GREENSPAN, H. P., On the dynamics of cell cleavage, 79
Grooming, social, among adult female monkeys, a model of, 671

HIDESHIMA, T., KIMIZUKA, H., ABOOD, L. G. and TANAKA, R., ATP and other nucleotide interaction with model compounds of amino acids, 15
Histones, an evolutionary scheme for, as derived from a study of internal repetitions and homologies among the different classes, 231
HOWELL, J. R. (see HUF, E. G.), 653
HUF, E. G. and HOWELL, J. R., Computer modelling. Application to studies on the initial rate of Na^+ uptake by frog skin epidermis, 653
Hypotheses on cell adhesion and actin cables, 397

Imagination, learning and perception, networks for: neuronal models for cognitive processes, 141
Immune processes, mathematical model of, 609
Immunoglobulins, secondary structure in synthetic messenger RNAs from, 591
Interpretation of transition state and substrate analog binding, 781

Iontophoretically applied drugs, the time course of cellular responses to, 327
Is there an instance of Steinberg's "site frequency model"?, 787
